

You wouldn't kayak without your paddle.

Don't go in the water without a Nautilus LIFELINE !

**Always Connected.**

**Never Left Behind.**

Ideal for Kayakers, Scuba Divers, Sailors, Kite-Boarders, Stand Up Paddle-Boarders, Swimmers and Surfers

**The Nautilus Lifeline is the world's first waterproof, fully-functional VHF marine radio with GPS.**

- 8-mile range
- Depth rated to 130m
- Programmable chat/boat VHF channels
- Flashing locator beacon
- DSC compatible distress alerts
- Rechargeable battery lasts 24 hours in Emergency Mode
- Two year warranty

Call nearby boats for help, simply press the red button

**Putting safety into your hands**

automated distress signal by pushing and holding the red button for three seconds. In this situation all modern VHF marine radios within range will receive an automated distress signal alarm and your exact coordinates will be visible on the readout of their marine VHF radio. In automated distress mode the range is double the range of normal voice communication.

The inventor of the Nautilus Lifeline Mike Lever, a live aboard charter operator of more than 20 years was focused on a solution for the very real problem of lost divers however end users started to realise that the opportunity was much larger than just diving. The Nautilus Lifeline is now being used by a wide variety of water sports enthusiasts including stand up paddlers, sea kayakers, kite boarders, jet ski riders, rock fishermen etc. Literally anywhere on or near the water is a potential market.

Years ago no one had even thought of a pressure gauge, a BCD, an octopus - let alone a dive computer or a safety sausage. One by one all of these items have become mandatory pieces of equipment. The Nautilus Lifeline in our opinion is as important as any of these devices.

In the event the diver cannot contact the dive boat they can then choose the orange button

which allows transmission on VHF Channel 16 (International marine distress frequency). This will allow the diver to speak with any VHF equipped vessel or shore station within range.

In an emergency situation, the diver can also send an

The Nautilus Lifeline is the world's first waterproof, fully-functional VHF marine radio with GPS.

- 8-mile range
- Depth rated to 130m
- Programmable chat/boat VHF channels
- Flashing locator beacon
- DSC compatible distress alerts
- Rechargeable battery lasts 24 hours in Emergency Mode
- Two year warranty

The Nautilus Lifeline incorporates both a GPS and a personal DSC (Digital Selective Calling) enabled VHF marine radio into a compact polycarbonate housing waterproof to 130m. Designed to be conveniently carried on every trip, in the event a problem, by simply opening the top of the unit and depressing the green button the kayaker can contact the boat on a pre selected "chat" channel. The kayaker can then relay his or her exact location by reading out the GPS coordinates on the large LCD screen positioned on the side of the unit.

In the event the kayaker cannot contact the boat they can then choose the orange button which allows transmission on VHF Channel 16 (International marine distress frequency). This will allow the kayaker to speak with any VHF equipped vessel or shore station within range.

In an emergency situation, the kayaker can also send an automated distress signal by pushing and holding the red button for three seconds. In this situation all modern VHF marine radios within range will receive an automated distress signal alarm and your exact coordinates will be visible on the readout of their marine VHF radio. In automated distress mode the range is double the range of normal voice communication.

The inventor of the Nautilus Lifeline Mike Lever, a live aboard charter operator of more than 20 years was focused on a solution for the very real problem of lost kayakers however end users started to realise that the opportunity was much larger than just kayaking. The Nautilus Lifeline is now being used by a wide variety of water sports enthusiasts including stand up paddlers, sea kayakers, kite boarders, jet ski riders, rock fishermen etc. Literally anywhere on or near the water is a potential market.

The Nautilus Lifeline in our opinion is an important piece of safety equipment that should be carried by all kayakers.
